Shock is the state of insufficient blood flow to the tissues of the body as a result of problems with the circulatory system. Initial symptoms of shock may include weakness, fast heart rate, fast breathing, sweating, anxiety, and increased thirst. This may be followed by confusion, unconsciousness, or cardiac arrest, as complications worsen. Shock is divided into four main types based on the ...

Active flapping flight needs a lot of energy to maintain. This, in turn, necessitates an efficient and effective circulatory system. Birds have evolved such a system and it is very similar to a mammal's. Bird blood is similar to ours, in that it contains both red (erythrocytes) and white blood cells called leucocytes. The red [...]
