The authors describe the pathophysiological mechanisms leading to development of acidosis in patients with chronic obstructive pulmonary disease and its deleterious effects on outcome and mortality rate. Renal compensatory adjustments consequent to acidosis are also described in detail with emphasis on differences between acute and chronic respiratory acidosis.

[bile - Wikipedia](#)

La bile o fiele è un liquido basico di colore giallo-verde secreto dal fegato.In molte specie essa, una volta prodotta dal fegato, viene immagazzinata e modificata nella cistifellea durante il periodo di digiuno e iniettata nel duodeno durante l'assunzione di cibo.. La bile svolge due funzioni principali: collabora ai processi della digestione e dell'assorbimento dei grassi alimentari e ...
