## Read Online Biomass

Torrefaction of biomass, e.g., wood or grain, is a mild form of pyrolysis at temperatures typically between 200 and 320 ° C.

Torrefaction changes biomass properties to provide a better fuel quality for combustion and

gasification  
applications.

Torrefaction  
produces a relatively  
dry product, which  
reduces or eliminates  
its potential for  
organic  
decomposition.
