2. Stages of Language Standardisation. Language standardisation begins by selecting one of the many forms of language that exist in a society to be the standard. The chosen one is then accepted by the dominant clans in society, who have the power to control how and where this language is standardized and diffused. They enforce authority towards this language by codifying it—directly and ...

The evolution of the peppered moth is an evolutionary instance of directional colour change in the moth population as a consequence of air pollution during the Industrial Revolution. The frequency of dark-coloured moths increased at that time, an example of industrial melanism. Later, when pollution was reduced, the light-coloured form again predominated.

Adaptation is an observable fact of life accepted by philosophers and natural historians from ancient times, independently of their views on evolution, but their explanations differed. Empedocles did not believe that adaptation required a final cause (a purpose), but thought that it "came about naturally, since such things survived." Aristotle did believe in final causes, but assumed that ...
