Heating degree day (HDD) is a measurement designed to quantify the demand for energy needed to heat a building. HDD is derived from measurements of outside air temperature. The heating requirements for a given building at a specific location are considered to be directly proportional to the number of HDD at that location. Related measurements include the cooling degree day (CDD), which ...

The psychrometric chart (Fig. 2) is a tool for understanding the relationships between the various parameters of supply air and the relative humidity. This template allows a designer or operator to "work backwards" from a desired room relative humidity to the desired condition of the air as it enters the supply duct.
