Amenorrhea is often a sign of another health problem rather than a disease itself, and it can happen for many reasons. It can occur as a natural part of life, such as during pregnancy or breastfeeding. It can also be a sign of a health problem, such as polycystic ovary syndrome (PCOS). Because amenorrhea is associated with health conditions that are also linked to infertility,

In one study, a combination of regular brisk walking and eating a healthier diet improved menstrual cycle regularity by 50%.

Whether diet and exercise alone will help you conceive isn't clear.

However, a healthy lifestyle may help your fertility treatments work better, and it will certainly help you feel better overall.
