[Managing And Troubleshooting Networks Answer](#)

The first step in troubleshooting a network is to identify the problem. As a part of this step, you should do the following: Gather information about the current state of the network using the network troubleshooting tools that you have available to you. Duplicate the problem on a test piece of hardware or software, if possible. This can help you to confirm where your problem lies.

Try sending a ping to a well-known, large server, such as Google, to see if it can connect with your router. You can ping Google DNS servers by opening the command prompt and typing “ping 8.8.8.8”; you can also add “-t” to the end (ping 8.8.8.8 -t) to get it to keep pinging the servers while you troubleshoot.
